

Zintek® ONE HP

One layer silver zinc flake base coat

Superior protection
with one coat

ONE layer – great performance

Atotech's silver zinc flake base coat eliminates the need for a second coat without compromising on performance. Zintek® ONE HP achieves the outstanding performance of 720 h NSST with only one zinc flake layer. Performance is dependent on part geometry, substrate and application method.

Economic choice – reliable coat

Zintek® ONE HP is designed to reduce process costs, handling costs, energy consumption and coating line occupancy by removing the need for a second coating step commonly required for standard zinc flake base coats. This makes Zintek® ONE HP a cost-effective alternative to multi-layer zinc flake applications and even hot dip galvanizing and electroplated corrosion protection finishes.

720

hours NSST can be achieved with
only one zinc flake layer
